## BEEB SELL-OFF COMPANY IN SOVIET NUCLEAR TECHNOLOGY TRANSFER DEAL SHOCKER

Last weekend Castle Technology International, the company formed earlier this year to buy up the Beeb's mast in a £200 privatisation deal, secretly embarked on tests of a technology previously used only by the Russian nuclear industry at the time of the Chernobyl disaster.

A small team of so called "Biorobots" was assembled for the test in the remote bottom left hand corner of England. As it swung into action it was thought to be the first use of such technology in Western Europe.

Their mission was to clear up a large quantity of egg which had been gathering close to a south coast mast. PDG can exclusively reveal that the situation was in grave danger of going critical and could have led to the egg spreading widely. "Those unfortunates in its path could have had it all over their faces" our on the spot reporting team was told by a Mr Nigel WhyMe, CTI's man on the spot adding that there had been no real danger to the general public from the Start.

## THE DOCTOR IS IN

Dr Rickenbacker of the University of Dudley continues with more answers to those challenges that life throws at you.

**It has been a few years since I left college and now I am finding it hard to keep up with new ideas and young people. Why is this?**

A herd of buffalo can only move as fast as the slowest buffalo, and when the herd is hunted, it is the slowest and weakest ones at the back that are killed first. This natural selection is good for the herd as a whole, because the general speed and health of the whole keeps improving by the regular culling of the weakest members.

In much the same way, the human brain can operate only as fast as the slowest brain cells. Excessive intake of alcohol, we all know, kills off brain cells, but naturally it attacks the slowest and weakest brain cells first. In this way, regular consumption of beer eliminates the weaker cells, constantly making the brain a faster and more efficient machine.

The results of this in-depth epidemiological study verifies and validates the causal link between all-weekend parties and engineering performance. It also explains why, after a few short years of leaving university and getting married, most engineers cannot keep up with the performance of the new graduates. Only those few that stick to the strict regimen of voracious alcoholic consumption can maintain the intellectual levels that they achieved during their university years.

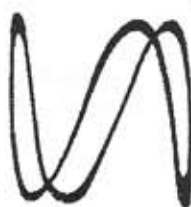

So, this is a call to arms. As our country is losing its technological edge we should not shudder in our homes. Get back into the bars! Quaff that pint! Your company and country need you to be at your peak, and you shouldn't deny yourself the career that you could have. **Be all that you can be.**

## MAKE YOUR OWN COMPANY FLAG

1. Cut around the dotted line (get a grown-up to do this if you haven't been on the Safe Use of Scissors Course). 2. Stick some double sided tape on the back of one half. 3. Stick the flag around a biro or pencil and Hey Bingo! - your very own CTI desk flag.

## UNCLE MACS' HOLIDAY CHECK LIST

Use this check list before leaving on your hols and your return should be much more pleasant.

- 1 Got Passport?
- 2 Got tickets?
- 3 Cancelled the milk and papers?
- 4 Put the cat/dog in kennels?
- 5 Put the transmitters back to full power?

## So Long Farewell Auf Wiedersehen Goodbye

To our Club Committee Member who left during September

Bob Bates. Joined March 1997. 7 months' service.

Best Wishes Bob, if you're reading this.

## HEAD OF HR CLAMPS OWN CAR

CTI's Head of Human Resources was last week forced to order his own car to be WHEELCLAMPED after inadvertently parking in the bay reserved for pool cars.

Whizzing back to the office in a hurry after losing track of time doing some early Christmas shopping in Woolies, HHR tucked his car into the first handy parking space he came across. It was only when he got back to his third floor office in Techno Towers that he realised his blunder. But by then it was too late and under tough new parking regulations he had no choice but to 'phone WTP Security and get them to slap the newly purchased company wheelclamp (painted in CTI colours) onto his OWN CAR.

### PAVLOVA

Ironically, this is the first - and only to date - occasion that the new wheelclamp, bought by HHR himself only the previous week, has been used in anger. Asked to comment on the palaver, HHR said EXCLUSIVELY TO PDG "I must admit I was tempted to sneak back downstairs and move the car before it was spotted but rules are rules and I felt I had to take the necessary steps to punish the culprit - even though it was me!" To get the clamp removed, HHR had to pay a £25 fine (payable by cheque, postal order, cash or scheme number).

## DIGITAL TIE

A short quote from our sister publication

"Having masterminded the DTT demonstrations at Sutton Coldfield and Chester earlier this year, Stephen is **NOT** (pdg emphasis) working on the BDB TIE design" Why not? The people should be told. It might have been a bit flakey but it wasn't that bad.
