

SECTION 25

DIODE NETWORK NE1/508

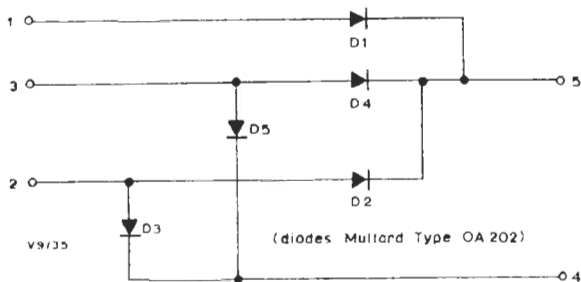

Fig. 25.1 Diode Network NE1/508

This network of five diodes, illustrated in Fig. 25.1, routes three inputs to one output and two of the three inputs to a second output. The diodes provide isolation between the inputs and between the outputs.

The network is mounted on a small printed wiring board which plugs into a larger unit. See also PA1/512, Instruction V.13 and EP5/502, Instruction V.15.
